### INTRODUCTION

Pizza Management is the famous website application has developed in Php Programming in Visual Studio. Now a day's most of the people are ordering pizza through online instead of going to shop. The selection procedure of the pizza over the net is very simple. After selecting the pizza the Pizza delivery boy will bring pizza directly to the customer's house in short time. In this we have to select items what we want and finally it will all the selected items in the list. After selecting items if we go to shopping cart there we can select quantity according to our items price will changes. There is another module named Admin, in this module we can update items and delete unwanted items.

### GOALS & OBJECTIVES

One of the main objectives of a restaurant to ensure customer satisfaction. Manual listing of orders by the waiters/waitresses may result to slow response in customer service. Hence, if the restaurant uses the proposed system, manipulation of orders to the customers be so easy and quick by just touching on the tablet and choosing the desired menu.

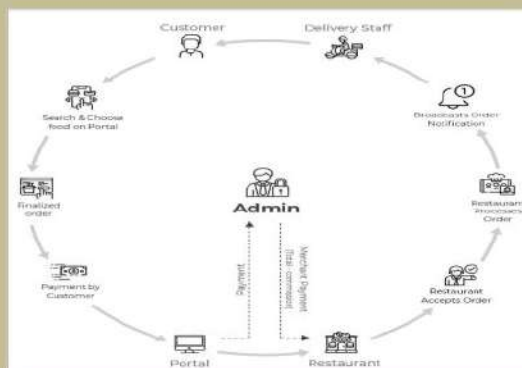

### TOOLS & TECHNOLOGIES USED

Type of Application: Web Based Application FrontEnd: HTML, CSS, Bootstrap
